

The Greatest All Purpose Wrench ever produced

This amazing tool is the outgrowth of one of those rare flashes of genius which come at times to every industry, upsetting established modes of practice. It is the invention of a practical mechanic, August C. Kloppe, who gave years to the development of his great idea.

The "Onli-1" Socket Wrench operates on a principle as old as the hills but new to wrenches.

Stripped of details it is simply a hollow steel tube through which a bar, with bevel gears at the angles, carries the turn of the handle to the turn of the nut.

By reason of this unusual construction the "Onli-1" reaches the inaccessible corners and does the work too difficult for other wrenches. It also does the ordinary work on all size nuts, extra sockets being provided. One wrench instead of a half dozen.

The "Onli-1" is made of the finest steels, heat treated and carefully inspected. The company guarantees to replace any wrench that can be broken. In action the wrench works easily and smoothly.

This wrench will eventually find its way into every public garage and into the private garages as well—why not?

An extension bar and seven sockets are furnished. Note the strong, simple construction shown in the sectional view of the "Onli-1."

A sturdy tool of almost unlimited usefulness. Made of the finest steel, heat treated and carefully inspected.

The application of an age-old principle makes "Onli-1" the greatest all-purpose wrench

Bevel gears solved the problem—it was the only way it could be solved—

By the use of bevel gears the turn of the hand is carried around the corners to the turn of the nut.

And now with this remarkable wrench the mean inaccessible places, on the car, can be reached with ease and work done that is far too difficult for the ordinary wrench.

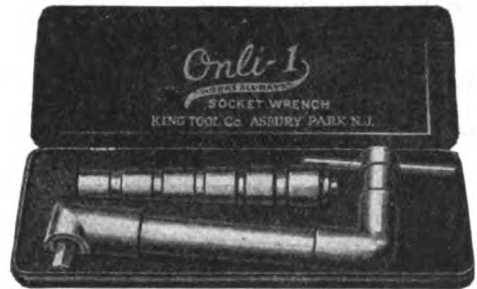

If a nut is too tight to respond to the turn of the handle—the whole wrench can be made rigid, from handle to socket, by a simple adjustment of the socket pin—and the leverage of the whole wrench utilized.

"Onli-1" is a he-man tool—you can't break it—the company guarantees that—and it's a half dozen wrenches in one. "Onli-1" is exactly the tool service men have wanted for years—and the motorists themselves will want it, too, and they'll get it.
